

Physical properties tests

We carry out tests in the scope of:

- geometrical, linear, angular measurements,
- surface roughness measurements,
- protective and safety coating thickness measurements,
- thickness measurements by ultrasonic method,
- glues, foams, fabrics, binding materials, plastics, rubber products, chemical materials,
- inspection ISO metric threads of general purpose,
- thermovision measurements,
- flow measurement with full compensation of pressure and temperature changes converting the volume in normal conditions (101,325 kPa abs, 0°C) or mass flow,
- flow measurement of working medium regardless of pressure, density and viscosity of the medium,
- mass measurements with accuracy 0,001 g.

Our Laboratory is accredited by Polish Centre for Accreditation [AB1552](#) in the scope of geometrical measurements.

Do you have any additional questions? Do you need to carry out tests according to different standard or method?

Contact us by [phone](#) or fill in the form below. We answer all inquiries.
